From: G-Solutions<sup>2</sup> (godlinessdongorere@gmail.com)  
Date: September 13, 2026  
Quote Ref: CATERFLOW-ADJ-2026-07-05

This quotation includes ONLY the two requested one-time adjustments. It excludes subscriptions, monthly fees, and ongoing support.

| Description                                                                                                                                                                                       | Deliverables                                                                                            | One-time Fee (SZL) |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------|--------------------|
| <b>Procurement → Finance approval workflow</b><br>Add 'Send to Finance' action after requisition summary generation; create API route, approval record, and notification hook for Finance review. | API route, UI button, approval workflow item, Finance email trigger, role-based access, and validation. | 4,000              |
| <b>Stock Count PDF export (including variances)</b><br>Add Export-to-PDF on Stock Count page with all variance rows, a printer-safe layout, and summary totals.                                   | UI button, printable HTML/PDF content, variances table, custom formatting, and cross-browser QA.        | 2,500              |
| <b>Subtotal</b>                                                                                                                                                                                   |                                                                                                         | <b>6,500</b>       |

Scope of Work

- **Procurement → Finance approval workflow:** add the UI button, connect it to requisition summary generation, implement a protected API route, create a Finance approval record, add role-based access, store audit details, trigger an EmailJS notification template, and validate success/failure states.
- **Stock Count PDF export:** add export controls, capture count and variance data, build a printer-safe HTML/PDF layout with headers/footers, include all variance rows and totals, and test print preview and browser compatibility.

**Notes**

- Implementation estimate: ~16–18 developer hours total, expected to be completed within 3 weeks to 1 month due to after-hours and weekend availability.
- Client acceptance of this quotation authorises G-Solutions<sup>2</sup> to begin work. A signed acceptance or written confirmation via email is required.
- This quote does not include any subscription, hosting, or Sanity plan fees. Any additional feature requests will be quoted separately.
- If a server-generated PDF is required (instead of client-side print), additional server work and infra may be necessary—quoted separately.
- **Work will only commence once the SZL 4,000 deposit has been received AND this quotation has been signed and returned to G-Solutions<sup>2</sup>.**

Email delivery (optional) — EmailJS

We recommend EmailJS for the Finance notification email so the client can send email without exposing server-side credentials. EmailJS pricing is separate; G-Solutions<sup>2</sup> will configure the integration, but EmailJS charges are paid directly to EmailJS.

| Plan (EmailJS) | Notes                                                                                                                                       |
|----------------|---------------------------------------------------------------------------------------------------------------------------------------------|
| Free           | Starter tier — limited templates and send limits, useful for proof-of-concept or low-volume notifications.                                  |
| Paid Plans     | Higher send limits, custom domain support, security features and better production reliability. See EmailJS pricing page for current rates. |

If you prefer, we can set up EmailJS and provide a separate recommendation for the right plan based on your expected volume.
