

Sanity Document Usage by Collection

Project v3sfsmlid · dataset **production** · caterflow-by-synapse · as of 21 Sept 2026

The **production** dataset holds **31,059** documents against Sanity's free-tier ceiling of **25,000** — already **6,059 documents (24% / +6,275 vs. the June 2026 export's ~24,784)** over the limit. Growth is driven almost entirely by transactional records that accumulate every day (dispatch logs, purchase orders, goods receipts) and by their attached files, not by master data (suppliers, bins, sites, users), which stays small and flat.

Breakdown by collection

Full detail

Collection	Published	Drafts	Total	% of total	% of quota
FileAttachment	9,908	1	9,909	31.9%	39.6%
DispatchLog	7,109	4	7,113	22.9%	28.5%
sanity.fileAsset	6,263	0	6,263	20.2%	25.1%

Collection	Published	Drafts	Total	% of total	% of quota
PurchaseOrder	3,246	0	3,246	10.5%	13.0%
GoodsReceipt	3,104	10	3,114	10.0%	12.5%
StockItem	704	16	720	2.3%	2.9%
InventoryCount	262	74	336	1.1%	1.3%
BinStock	180	0	180	0.6%	0.7%
DispatchType	56	0	56	0.2%	0.2%
AppUser	41	0	41	0.1%	0.2%
Supplier	21	1	22	0.1%	0.1%
Bin	16	3	19	0.1%	0.1%
Category	16	0	16	0.1%	0.1%
Site	9	1	10	0.0%	0.0%
system.group	10	0	10	0.0%	0.0%
stockRegistry	1	0	1	0.0%	0.0%
system.retention	1	0	1	0.0%	0.0%
system.schema	1	0	1	0.0%	0.0%
StockAdjustment	0	1	1	0.0%	0.0%
TOTAL	30,948	111	31,059	100.0%	124.2%

sanity.fileAsset rows are the binary files (images/PDFs) that **FileAttachment** documents reference; each upload counts as its own document against quota, separately from the record pointing at it. **system.*** documents (schema/group/retention, 12 rows) are Sanity-internal and shown for completeness — they are negligible either way. Draft counts reflect unpublished edits at query time and fluctuate day to day.

This directly informs the planned Sanity-to-MongoDB migration (plans/2026-09-15-sanity-to-mongodb-migration-plan.md): the dataset has grown ~25% past the quota since the last export used to scope that project (24,784 docs, June 2026), and the top three collections (*FileAttachment*, *DispatchLog*, *sanity.fileAsset*) account for **75%** of all documents and will keep growing fastest since they're written on every dispatch/order cycle.
